```
stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic I lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hepatitis B virus surface antigen; HBV; immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin E; IgE; anti-allergic; Plasmodium falciparum; circumsporozoite; antimalarial; CETP; cholesteryl ester transport protein; anti-arteriosclerotic.

treating allergies or arteriosclerosis. Incorporation of a promiscuous treating allergies or arteriosclerosis. Incorporation of a promiscuous treating allergies or arteriosclerosis. Incorporation of a promiscuous of the functional in genetically diverse subjects) into an immunogen continuous a strong T helper cell mediated immune response, resulting in production dig antibodies against a target artifer response, resulting in production dig antibodies against a target cartifer profesins and pathogen-derived T helper epitopes. Sequence AAY91121 represents a promiscuous Thelper epitope (from the measles virus F (MWF) protein and sequences AAY91122-Y91142 are presents a promiscuous The epitope. Sequence AAY91143 represents a promiscuous Th epitope. CC AAY91165 are synthetic epitopes derived from this HBV epitope. CC AAY91165 are synthetic epitopes derived from this HBV epitope. CC AAY91166-Y91167 AAY91127 and AAY91247-Y91244 are antigenic peptides aAY911200 is somatostatin, and AAY91201-Y91207 are antigenic peptides comprising somatostatin, and AAY91201-Y91207 are antigenic peptides comprising somatostatin, and AAY91201-Y91207 are antigenic peptides which may be used to promote growth in livestock. AAX91208 is a immunogens may be used to promote growth in livestock. AAX91208 is a comprising somatostatin, and AAY91201-Y91207 are antigenic peptides which may be used to prevent HIV contection of T cells. AAY90212 is a modified version of a human IgE comprise which may be used to prevent of antigenic peptides which may be used in the treatment of allergies. AAY91220 is a peptide derived from foot and mouth disease virus (FMDV) contingen, and AAY91221 is a Plasmodium falciparum circumsporcacite (CS) target antigen, and AAY91222 is a Plasmodium falciparum circumsporcacite (CS) target comprise and may be used to antigen and any be used in an allaria vaccine. AAY91224 ind and AAY91224 ind and AAY91224 ind and any be used to prevent the ceptope and may be used to antigen and any be used to prevent the ceptope. AAY91221 is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CETP-derived peptides and AAY91232-Y91241 are immunogens comprising a CETP peptide and a Th epitope which may be used to prevent or treat arteriosclerosis and cardiovascular disease. AAY91247 and AAY91252-Y91257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            are HIV-1 neutralising B-cell epitopes, and AAY91248-Y91251 and
AAY91258-Y91273 are antigenic peptides comprising MVH Th and HIV-1 B-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    epitope which may be used as a component in an anti-HIV-1 vaccine. Avg1198 and ANY91199 are respectively an immunostimulatory invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the
                                                                                                                                                                                                                   containing them, are used to induce at helper cell response, specifically against Plasmodium falciparum, cholesterly ester transport protein (CETP) or HIV epitopes, but more generally against any pathogen, immunoreactive self-antigen or tumour antigen. The Th epitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malaria); for cancer immunotherapy; for inhibition of the action of luteinising hormone (LHRM) for contraception, treatment of hormone dependent cancer, prevention of boar taint in meat, and immunocastration); for promoting the growth of animals; or for
antigenic site, for immunization against e.g. malaria, arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                    The invention relates to novel promiscuous T helper cell epitopes (T) and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 27;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 113; DB 21;

The present sequence represents a peptide immunogen comprising a target antigen, luteinising hormone-releasing hormone (LHRH).

The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of specific immune response to LHRH which is involved in regulation of specific immune response to LHRH which is involved in regulation of sex hormones. Provision of a promiscuous T helper epitope (which is functional in genetically diverse subjects) provides optimum immunogenicity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen. The peptide immunogens of the invention are used to vaccinate against mammalian LHRH, for use as (reversible) contraceptive, control of hormone-dependent tumours (cancer of prostate or breast, also endometricisis); to prevent boar taint (and improve meat
                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for

The invention relates to novel promiscuous T helper cell epitopes (Th),
and immunogenic peptides comprising the Th epitopes of the invention
calong with B cell epitopes. The The pitopes and peptide immunogens
containing them, are used to induce a T helper cell response,
specifically against Plasmodium falciparum, cholesteryl ester transport
containing them, are used to induce a T helper cell response,
containing (CETP) or HIV peptiopes, but more generally against any pathogen,
immunoceactive self-antigen or tumour antigen. The Th epitopes and
peptide immunogens may be used for prevention and/or treatment of
infections (HHV, foot rand-mouth disease or malaria); for cancer
immunotherapy; for inhibition of the action of luteinising hormone
releasing hormone (LHRH) for contraception, treatment of hormone
releasing hormone (LHRH) for contraception, treatment of hormone
creleasing hormone (LHRH) for contraception, treatment of hormone
creleasing allergies or arteriosclerosis. Incorporation of a promiscuous
treating allergies or arteriosclerosis. Incorporation of a promiscuous
the (functional in genetically diverse subjects) into an immunogen
improves capacity to induce a strong T helper cell-mediated immune
cresponse, resulting in production of antibodies against a target
antigen. Th can replace carrier proteins and pathogen-derived T helper
coptiopes. Sequence AAY91121 represents a promiscuous T helper
from the measles virus F (MVF) protein and sequences AAY91122-Y91142,
horstine, protein and sequences AAY91124 represents a promiscuous The pitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              peptides comprising somatostatin and a Th epitope. Somatostatin immunogens may be used to promote growth in livestock. AAY91208 is a miniman Cb4 CDR2-like domain antigenic site, and AAY91209-Y90211 are WVH Th epitope/CD4 CDR2 antigenic peptides which may be used to prevent HIV infection of T cells. AAY90211 is a modified version of a human Ige
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     comprising an LHRH sequence joined to a promiscuous Th epitope. AAY91197 is the LHRH target antigenic peptide used in these LHRH antigenic peptides. AAY91200 is somatostatin, and AAY91201-Y91207 are antigenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus
                                                                                                                                                                                                                 hepatitis B virus surface antigen; HBV; immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin E; IgE; anti-allergic; Plasmodium falciparum; circumsporozotie; antimalarial; CETP; cholesteryl ester transport protein; anti-arteriosclerotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             from hepatitis B virus (HBV) surface antigen, and sequences
AAY91144-Y91155 are synthetic epitopes derived from this HBV epitope.
AAY91156-Y91196, AAY91227 and AAY91242-Y91244 are antigenic peptides
                                                                                                                                                                                               Promiscuous T-cell epitope; measles virus F protein; MVF;
                                                                                                                                              MVF Th epitope/LHRH antigenic peptide, SEQ ID NO:36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 1; Page 77; 129pp; English.

Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HiA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents an LHRH-containing, invasin-free immunogenic peptide as above which can be used as a potent vaccine for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which ellcits an immune response to the coupled peptide in members of a heterogeneous population expensaing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain ment of the invasin domain and the immune stimulator component.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents an LHRH-containing, invasin-free Immunogenic peptide as above which can be used as a potent vaccine for
                        "measles virus F protein helper T cell epitope"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Helper T cell epitope; universal immune stimulator; invasin; hapten; vaccine; LHRH; luteinising hormone releasing hormone; prostate; androgen-dependent carcinoma; antitumour; infertility;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           à
                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                            The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone. LIRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other synaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

```
The invention relates to a synthetic immunogen for inducing specific antibodies against gonadcropin releasing hormone (GnRH also known set luteinising hormone releasing hormone. LRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic limmunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

N.Contains: fusion protein F1; fusion protein F2
C; Species: canine distemper virus
C; Date: 30-Jun-1991 #sequence_revision 30-Jun-1991 #text_change 16-Jul-1999
C; Accession: JS0321
R; Barrett, T; Clark, D.K.; Evans, S.A.; Rima, B.K.
Virus Res. 8, 373-386, 1987
A; Title: The nucleotide sequence of the gene encoding the F protein of canine distemper A; Reference number: JS0321; MUD: 88129050; PMID: 3433924
A; Recession: JS0321
A; Molecule type: mRNA
A; Accession: JS0321
A; Molecule type: mRNA

                                                                                                                                                            e Virus entity.

A. Reference number: JQ2223; MUID:93389459; PMID:8376973

A. Molecule type: mRNA

A. Residues: 1-542 <VIS>
A. Mote: the authors translated the codon ATC for residue 4 as Leu C: Comment: This fusion protein F0 is cleaved into F1 and F2 chains.
C: Genetics: F

"Nucleotide sequences of the fusion protein gene of subacute
"Nucleotide sequences of the fusion protein gene of subacute
showed the cytoplasmic domain highly mutated --truncated, elongated or
predicted secondary structure changed.";
Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.

Nature 359:832-835(992).
-!- FUNCTION: BOTULINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER
RELEASE. IT BINDS TO PERIPHERAL NEURONAL SYNAPSES, IS INTERNALIZED
AND MOVEE BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD
WHERE IT CAN WOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT
INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC
ENDOPEPTIDASE THAT CLEAVES THE 76-GLN-|-PHE-77 BOND OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CATALTYTC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.

COFACTOR: Binds 1 zinc ion per subunit (By similarity).

SUBUNIT: DISULFIDE-LINED HETERODIMER OF A LIGHT CHAIN (L) AND A HEAVY CHAIN (H). THE LIGHT CHAIN HAS THE PHARMACOLOGICAL ACTIVITY, WHILE THE NAND C-TERRINAL OF THE HEAVY CHAIN MEDIATE CHANNEL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE-93063293; PubMed-1331807; Schlavo G., Benfenati F., Poulain B., Rossetto O., de Laureto P.P., Dasgupta B.R., Montecucco C.; "Tetanus and botulinum-B neurotoxins block neurotransmitter release
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Schiavo G., Rossetto O., Santucci A., Dasgupta B.R., Montecucco C., "Botulinum neurotoxins are zinc proteins.";

"The complete sequence of four major structural proteins of African horse sickness virus serotype 6: evolutionary relationships within and between the orbiviruses.";
Virus Res. 53:53-73(1998).
-!- PUNCTION: THE VP2 PROTEIN IS ONE OF THE TWO PROTEINS (WITH VP5) WHICH CONSTITUTE THE WIRUS PARTICLE OUTER CAPSID. IT IS THE MAJOR TARGET OF THE HOST IMMUNGENIC RESPONSE.
-!- SIMILARITY: BELONGS TO THE REOVIRUSES VP2 FAMILY.
                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RELEASE. IT BINDS TO PERIPHERAL NEURONAL SYNAPSES, IS INTERNALIZED AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT INHIBITS NEUROFRANSMITTER RELEASE BY ACTING AS A ZINC ENDOPEPTIDASE THAT CATALYZES THE HYDROLYSIS OF THE 58-GLN-|-LYS-59 BOND OF SYNAPTORREVINS-1 AND -2.
CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -:- COFACTOR: Binds 1 zinc ion per subunit (By similarity).
-:- SUBUNIT: DISULFIDE-LINKED HETERODIMER OF A LIGHT CHAIN (L) AND A HEAVY CHAIN (H). THE LIGHT CHAIN HAS THE PHARMACOLOGICAL ACTIVITY, WHILE THE NAND C-TERMINAL OF THE HEAVY CHAIN MEDIATE CHANNEL FORMATION AND TOXIN BINDING, RESPECTIVELY.
-: SUBCELLULAR LOCATION: Secreted.
-:- SUBCELLULAR LOCATION: Secreted.
-:- MISCELLANEOUS: THERE ARE SEVEN ANTIGENICALLY DISTINCT FORMS OF BOTULINUM NEUBROTOXIN: TYPES A, B, Cl, D, E, F, AND G.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              East A.K., Collins M.D.;

    membrane, is then internalized by receptor-mediated endoytosis. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the cell surface while the N-terminus mediates transport of the light chain from the endoytic vesicle to the cytosol. After translocation, the light chain (L) hydrolyzes the 197-Gln-|-Arg-198 bond in SNAP-25, thereby blocking
